

# Qingkai Shi

ADDRESS	Department of Computer and Science Purdue University 305 N. University Street West Lafayette, IN 47907 Email: <a href="mailto:shi553@purdue.edu">shi553@purdue.edu</a> URL: <a href="https://qingkaishi.github.io/">https://qingkaishi.github.io/</a> ORCID: 0000-0002-8297-8998	
EDUCATION & EMPLOYMENT	<b>Purdue University</b> <i>Postdoctoral Research Associate</i>	2021 - Now
	<b>Hong Kong University of Science and Technology / Sourcebrella Inc.</b> <i>Ph.D. in Computer Science (2020) / Co-founder of Sourcebrella Inc. (2021)</i> <i>Thesis: Precise and Scalable Static Bug Finding for Industrial-Sized Code</i>	2015 - 2021
RESEARCH & AWARDS	<p>My research focuses on the use of programming language and compiler techniques, especially static analysis, for rigorously ensuring software security, including static analysis for (1) bug scanning, (2) reverse engineering, and (3) fuzz testing. My research has been extensively published in premium venues and has let me win ACM SIGPLAN Distinguished Paper Award, ACM SIGSOFT Distinguished Paper Award, Google Research Paper Reward, and Hong Kong Ph.D. Fellowship.</p> <p>My research on bug scanning, known as the <i>Pinpoint Static Analyzer</i>, has received 200M CNY (<math>\approx</math> 30M USD) investment. The startup that commercializes my research, <a href="#">Sourcebrella Inc.</a>, has been acquired by <a href="#">Ant Group</a>, where <i>Pinpoint</i> is deployed in daily operations for improving the quality of <a href="#">Alipay</a>, a popular digital payment app with over a billion monthly active users. To date, we have discovered hundreds of vulnerabilities and CVEs in mature software.</p> <p><i>For further information, see <a href="https://qingkaishi.github.io/">https://qingkaishi.github.io/</a>.</i></p>	
REFEREED PUBLICATIONS	<p>My research has been published extensively at premium venues of programming language (PLDI, OOPSLA), software engineering (ICSE, FSE), and cybersecurity (S&amp;P, CCS).</p> <p><b>Representative Papers:</b></p> <ol style="list-style-type: none"><li>1. <b>Qingkai Shi</b>, Xiangzhe Xu, and Xiangyu Zhang. Extracting Protocol Format as State Machine via Controlled Static Loop Analysis. In <i>Proceedings of the USENIX Security Symposium (Security'23)</i>. 2023.</li><li>2. <b>Qingkai Shi</b>, Junyang Shao, Yapeng Ye, Mingwei Zheng, and Xiangyu Zhang. Lifting Network Protocol Implementation to Precise Format Specification with Security Applications. In <i>Proceedings of the ACM Conference on Computer and Communications Security (CCS'23)</i>. 2023.</li><li>3. <b>Qingkai Shi</b>, Yongchao Wang, Peisen Yao, and Charles Zhang. Indexing the Extended Dyck-CFL Reachability for Context-Sensitive Program Analysis. In <i>Proceedings of the ACM on Programming Languages (OOPSLA'22)</i>. 2022.</li></ol>
